

## SECURITY AND BACKUP

Security is a top priority at Expertz on Demand.com. It is known that the confidentiality, integrity, and availability of our service is of great significance to our customers. We do not take the security and availability of our platform lightly.

### **Data Center Security**

Expertz on Demand.com stores your in our hardened enterprise-grade data centers that have strict personnel access controls, on site security, and audits to keep your information safe. Daily logs are stored to monitor and evaluate our systems to improve security.

### **Application Security**

Expertz on Demand.com takes every measure to protect your information from loss and unauthorized access. All connections to account information is done through SSL 3.0/TLS to ensure that the connection and information between your browser and our service is never compromised. All http connections are immediately redirected to the https (SSL/TLS) equivalent. No direct http account access is permitted.

### **Data Backup and Disaster Recovery**

To ensure the integrity and availability of your data, data centers are equipped with load balancers and other preventative methods that would cause your information to not be available. All database information is backed-up daily and encrypted using the AES (Advanced Encryption Standard) algorithm on creation.

### **Anti-virus Security**

To protect the integrity of your data anti-virus software is deployed across the servers to ensure data is protected from viruses and malware.

**Connecting You and Super Star Freelancers**

*"Our goal is simple. Helping you grow your business"*
